Bat Survey

Due to the nature of the existing building I have not commissioned a bat survey.

The structure only acquired a roof in recent years and is very open.

I spend a good deal of time in the building, mending fishing gear, but have never observed any bats leaving or entering. Nor is there any evidence of any roosting.

When dismantling the structure, I will again check for evidence of bats and contact planners if any are present.

In addition we will provide a bat box under the eaves at the eastern end of the building to encourage future residents.
