Dear Ms Walton

Re Planning application for replacement windows at Greystones, 1 Well Cross, Hugh Town

Many thank for your email.

I enclose metric scale drawings of the proposed new windows. The windows are of two different sizes. The six windows on the front wall, ie the wall with the front door in it, are of one size and the two windows on the wall facing the harbour (Strand facing) are both the same size but a different size to the other six. I have therefore submitted two different metric scale drawings to represent the two different size windows.

The new windows will be set back, as the existing ones are, and not flush with the wall. The idea is to make the windows look as near as possible to what we have been advised the original windows in the cottage would have been, so they are being constructed to look like old fashioned sash windows. We believe the original windows would have been set back within the window apertures and not flush with the outside wall.

We have now provided photographs of all the existing windows which are to be replaced.

We are happy for you to amend the description to 'replacement of all existing windows to the front (west) elevation and side (north elevation) with timber double glazed units'.

I do hope this is now satisfactory and many thanks for your help.

Best wishes

Marilyn Sonnex
