Dear Planning Department,

REF: Planning application for proposed alterations to existing conservatory

We are writing to support our application to alter our existing conservatory. The current conservatory is far too hot in the summer months and too cold in the winter months. The current glass roof is deteriorating and leaks when it rains. We have already had one instance when water got into one of the electric sockets and blew the power in the whole house.

The current conservatory is not a very useable space and has become a storage area. As a family of six we would like to make it a useable room and another living space for our family. The proposed extension would not be any bigger than the existing conservatory, it would be built on the existing base and would enable us to have another living room that we could use all year round.

Yours sincerely,

S.M & J.A Hicks.
