

### **Probable Window & Door Supplier**

P C Green Building Services

We are happy to liaise with the planning department to procure materials of the correct type, quality and specification. The installer will be Mr Peter Green who will remeasure the openings to check for the appropriate tolerances for fitting. This may result in some minor dimension changes.

### **Waste Management**

Materials to be disposed of include wooden windows and one wooden door. The existing timber windows will have the glass separated and will then be cut into smaller pieces. The timber and the glass will then be sent to the recycling centre separately.

### **Supporting Statement**

The existing windows and door are timber and single glazed. Changing them to double glazed UPVC will enhance energy efficiency within the property, reduce noise from the constant daytime traffic. Most of the buildings around the area and adjacent have white UPVC of a range of differing styles including sliding sash windows and UPVC front doors.
