Planning application for an additional dormer at 10 Parsons Field, St Mary's, Isles of Scilly. TR21 0JJ.

Dear Mrs Walton,

We are writing to support our planning application for an additional dormer at our house 10 Parsons Field. The current landing area upstairs has a velux window but due to the eaves, space is very limited and cannot be used for any real purpose. The creation of an additional dormer in between the two that we already have would enable us to create a useable space for our family. We have four children so there are six people permanently living in the property. We are trying to maximise the space that we have to provide as much living space as possible. We feel that the creation of an additional dormer would have very minimal impact on our neighbours and the surrounding area. We already have three dormers at the back of the house and many properties in the surrounding area have one large dormer that goes all the way across – for example Santa Maria and Kistvean on Sally Port. The additional dormer would not overlook any neighbours or cause any loss of light as it would be in between the two that are already there.

We hope that you will approve our application as it will considerably improve our living space.

Yours sincerely,

Jenny and Scot Hicks.
