SITE WASTE MANAGEMENT PLAN

THE TIDES

ST. MARY'S

DESCRIPTION OF PROJECT

Erection of boathouse store on the Eastern elevation of The Tides. The location is undeveloped and there will be no demolition required prior to start of construction.

WASTE RESULTANT FROM FOUNDATION EXCAVATION

There will be minimal soil / debris created as a result of the excavation. Any top soil that is removed can be redistributed about the garden area of the property.

CONSTRUCTION WASTE

The project has been carefully costed and materials required estimated accurately. We do not envisage any surplus from the construction phase. Off cuts of timber will be used on future jobs and any packaging recycled via the existing waste streams.
