

## SITE WASTE MANAGEMENT PLAN

### PART 1

This project will produce a very limited amount of waste. There will be a small quantity of blockwork from the front wall that will be removed for the window and a small amount of corrugated sheeting above.

Material	Approx. quantity	Disposal
Concrete blocks	2.16 m <sup>2</sup>	This will be collected by a haulage company and disposed of at Pendrethan Quarry
Corrugated sheeting	2.70 m <sup>2</sup>	The sheeting will be double bagged (in specially bought bags from the Council) and booked for disposal at Porthmellon Waste and Recycling Centre in accordance with guidance from the Council.

### PART 2

Because of the limited quantity of waste material, it can be stored inside the building until the pre-arranged booking at Porthmellon Waste and Recycling Centre. It is anticipated that the amount of time required to remove the waste material and organise it's disposal will be minimal.

### FURTHER INFORMATION

- I can confirm that no asbestos containing materials will be removed or disturbed within the building.
- There is a solid concrete wall protecting the inside of the building from the suspected asbestos containing sheets outside so there can be no contamination during removal.
- The entire interior of the building is lined, furthermore the room for the new venture has had all new walls and ceiling put in.
